14 July 2026

Dear Hiring Manager,

Position: Data Analyst

I am writing to express my strong interest in the Data Analyst role at your company. As a First-Class Honours Computer Science graduate currently pursuing a PG Diploma in Data Science, I bring a proven ability to engineer production-grade data pipelines, apply machine learning at scale, and translate analytical findings into clear, actionable business insight. I am confident my hands-on background makes me a strong fit for a results-driven data science team.

My core technical strengths lie in Python and SQL, which I apply across the full data lifecycle — from ingestion and cleaning through to modelling and visualisation. During my AI internship at Mach24 Orbitals, I built an automated end-to-end geospatial data pipeline using the Google Earth Engine API, eliminating manual processing and significantly reducing time-to-insight for satellite imagery analysis. Complementing this, my EduFin Investigation project demonstrates my analytical depth: I engineered PySpark and SQL pipelines in Databricks to analyse a 15,000+ student loan portfolio and surfaced a Rs. 12 Crore financial discrepancy through rigorous segmentation analysis — a direct example of data science creating tangible commercial impact.

Beyond individual analysis, I have strong data engineering foundations that allow me to deliver reliable, scalable solutions. I architected a production-ready Medallion Architecture (Bronze/Silver/Gold) ELT pipeline for NYC parking violation data using dbt Core and DuckDB, with automated CI/CD deployments via GitHub Actions. My experience with Docker, MLflow, Airflow, and Snowflake further ensures I can operate effectively across modern cloud and MLOps stacks. I believe clean, well-tested data infrastructure is the foundation of any trustworthy data science function, and I take pride in building it right.

I am equally committed to communicating data clearly. As a Graduate Teaching Assistant, I designed and delivered Big Data and HPC curriculum to over 120 students, consistently translating complex technical concepts into accessible, practical learning. I am excited to bring the same clarity to cross-functional stakeholders at your company — bridging the gap between data science outputs and business decisions. I would welcome the chance to discuss how my skills can contribute to your team's goals, and I look forward to the opportunity for an interview.

Best regards,
Siddhartha Shakya
